

Restore documents, not just scan them.

Private document workflow for iPhone and iPad
DocMate 1.1.0

DocMate helps independent professionals turn messy paper and PDFs into useful documents on iPhone and iPad. Start with a scan or import, restore difficult lighting, then recognize and search the text. Document Intelligence can surface useful details from supported documents; availability depends on device, OS, language and source. Compare revisions, review the right version, add a signature and keep the original. Permanent Redaction removes selected content from a redacted copy. Documents, Folders, Workspaces and Activity keep the work in context. DocMate is free to download, with optional monthly or annual Pro subscriptions. Local prices and included features are shown in the app.

Restore → Understand

Scan or import. Reduce difficult shadows.
Recognize and search text. Find useful details on supported documents.

Compare → Review → Sign

Inspect revisions, review the right version and create a signed version while retaining the original.

Protect → Verify

Permanently redact selected content in a redacted copy. Inspect DocMate verification information.

Keep the work in context

Documents, Folders, Workspaces and Activity connect each document to its history.

Honest limits

Results and availability depend on device, OS, language and source. Check important information against the original and inspect the exported redacted copy. Verification does not establish signer identity or legal authority. Processing is on device where supported; optional iCloud and Apple services are described in the privacy policy.
